

# Installation Configuration

Open terminal and go to your project directory and do composer install :

```
$ composer install
```

Update composer class file :

```
$ composer dump-autoload
```

## Run DB Migration

DB Migration run with module perspective. Modules may be contains one or more Migration file. To Run Migration following command

Suppose, Auth Module contains Migration file in 'migrations' folder

```
php yii mongodb-migrate/up --migrationPath=@app/modules/ecosmob/auth/migrations
```

Here 'migrationPath' define Migration file location
